

Vinith Chaduvu

Northville, MI | +1 (626) 949-5996 | vinithreddychaduvu@mail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building document intelligence and NLP and Full Stack applications. Enjoys tackling data challenges end-to-end—from messy inputs to working solutions. Eager to contribute to teams solving real-world problems with machine learning and modern AI tools.

TECHNICAL SKILLS

Programming & ML: Python, SQL, PyTorch, Scikit-learn, LangChain, Hugging Face, OpenCV
Cloud & DevOps: Azure (Document Intelligence, SQL, AI Foundry, AI Search, AI Vision, DevOps), Docker, CI/CD
Frameworks & Databases: FastAPI, React, Vector DBs (Qdrant, PineCone), Neo4j
AI/ML Specializations: RAG Systems, NLP, Deep Learning, Model Fine-tuning, MLOps

EXPERIENCE

Generative AI Developer <i>DataFactz LLC (Client: Terracon)</i>	May 2025 – Present Northville, Michigan, US
- Built a geotechnical document-processing pipeline using Azure Document Intelligence to extract handwritten and annotated boring log data with 85%+ accuracy and 15–20 second average processing time - Developed a React + FastAPI platform for field engineers to upload boring logs and instantly access structured soil, depth, and groundwater data - Designed and optimized Azure SQL schemas for geotechnical measurements, improving data accessibility and reliability - Implemented Azure DevOps CI/CD pipelines, reducing deployment time by 40% and ensuring consistent production releases - Added rule-based validation checks that automatically detect extraction anomalies, reducing manual review effort by 50%	
AI/ML Developer <i>Accenture (Client: Vodafone)</i>	Oct 2022 – Oct 2023 Bangalore, India
- Deployed production sentiment analysis system using NLTK and Python for Vodafone customer service, achieving 92% classification accuracy on 10K+ daily interactions - Built conversational AI chatbot with intent classification and entity extraction, reducing Level 1 support tickets by 35% and cutting average response time from 8 to 5 minutes - Optimized SQL queries and implemented database indexing across 3 enterprise applications, reducing average query response time by 24% (from 2.1s to 1.6s) - Delivered 4 AI/ML solutions within tight client deadlines by collaborating with cross-functional teams and translating business requirements into technical implementations	

EDUCATION

Yeshiva University <i>Master of Science in Artificial Intelligence</i>	New York, NY Sep 2023 – May 2025
Relevant Coursework: Deep Learning, Natural Language Processing, Computer Vision, MLOps, Machine Learning	
Vignan Institute of Technology and Sciences <i>Bachelor of Technology in Computer Science</i>	Hyderabad, India Aug 2018 – Aug 2022

AI/ML PROJECTS

Global Carbon Accounting RAG System <i>Python, Mistral-7B, Qdrant, Fine-tuning</i>	2025
- Fine-tuned Mistral-7B model on 23K+ emission factors from 44 global regions, achieving 87.2% accuracy on carbon accounting compliance queries - Optimized Qdrant vector search achieving 148ms average query latency, enabling real-time EU Carbon Border Adjustment Mechanism lookups	
TaskFin: AI Bill Payment Assistant <i>Claude API, LangChain, FastAPI</i>	2025
- Built secure fintech application using Claude 3.5 Sonnet API for natural language bill payments, achieving 96% intent classification accuracy on test dataset - Implemented JWT authentication and fuzzy string matching algorithms for account resolution, handling edge cases in 94% of payment scenarios
