SUMMARY

Generative AI Engineer with experience building AI applications using RAG, multi-agent workflows, and Azure AI services. Contributed to document intelligence, multimodal data processing, and LLM-powered automation projects from proof-of-concept through deployment. Familiar with developing practical AI systems and applying modern AI technologies to real-world engineering workflows.

EXPERIENCE

Generative AI Engineer

DataFactz LLC

July 2025 – Present

Northville, MI

- Contributed across the full development lifecycle, helping evolve AI solutions from an initial proof-of-concept toward production deployment
- Developed document-processing workflows using Azure Document Intelligence to extract structured data from geotechnical boring log images for downstream AI applications
- Implemented agents and workflow logic as part of a multi-agent system with 6+ specialized agents coordinated through an orchestration agent for Environmental Site Assessment (ESA) automation
- Built AI workflows that process engineering reports, images, and text using Azure AI Foundry, Azure AI Search, Document Intelligence, and Computer Vision
- Developed reusable agent components including tools, prompt templates, and workflow patterns to accelerate development of new AI capabilities
- Worked with stakeholders and engineering teams to gather requirements, demonstrate solutions, incorporate feedback, and support delivery of AI applications

Packaged App Developer

Accenture

Oct 2022 – Oct 2023

Bangalore, India

- Contributed to a customer-sentiment classification pipeline for inbound support interactions, building and testing the text-processing components and integrating outputs into the team's escalation tooling.
- Worked on a CRM-integrated support chatbot for Vodafone, developing intent-handling and response logic and helping route unresolved queries to live agents, which reduced repetitive tickets reaching the support team.
- Tuned SQL queries and indexing on high-traffic enterprise reports to clear performance bottlenecks identified with the data team, cutting query response times by 24%

TECHNICAL SKILLS

AI / LLM: RAG Systems, Multi-agent Architectures, LLM Fine-tuning, Prompt Engineering, LangChain, Langgraph, Vector Databases (Azure AI Search, Qdrant)

Cloud (Azure): AI Foundry, AI Search, Document Intelligence, Computer Vision, Azure SQL, Application Insights, Service Bus, Azure Functions, Blob Storage

ML & Data: NLP, Deep Learning, Computer Vision, PyTorch

Engineering: Python, SQL, FastAPI, React, Docker, CI/CD, Git, OpenTelemetry

EDUCATION

Yeshiva University

Master of Science in Artificial Intelligence

New York, NY

Sep 2023 – May 2025

Vignan Institute of Technology and Sciences

Bachelor of Technology in Computer Science

Hyderabad, India

Aug 2018 – Aug 2022

LEADERSHIP & COMMUNICATION

- Delivered internal knowledge-sharing sessions on Claude-based development workflows, covering agent architecture, prompt design, tool integration, and AI-assisted software development practices.
- Presented AI solution workflows to stakeholders, explaining multi-agent systems, document intelligence, and business value to both technical and non-technical audiences.
